## **Abstract**

To meet the demands for rising living standards in this century, African countries need to upgrade its energy supply. They can only do it with massive support from the COP project, which would reduce the global warming risk, globally. Solar power parks like Quarzazate is the future for the African continent.

**Keywords:** African energy and CO2 emissions, fresh and clean water, lakes and rivers, new and old renewables, coal or oil and gas dependency, Super Fund.
